THEORETICAL NAVAL ARCHITECTURE:

A TREATISE

ON THE

CALCULATIONS INVOLVED IN NAVAL DESIGN.

BY

SAMUEL J. P. THEARLE,

Fellow of the Royal School of Naval Architecture; Member of the Institution of Naval Architects; Surveyor to Lloyd's Register of Shipping; late of the Admiralty, Whitehall.

VOL. II.—PLATES AND TABLES.

NEW YORK:
G. P. PUTNAM'S SONS,
27 AND 29 WEST TWENTY-THIRD STREET.

1877

CONTENTS.

The figures indicate the numbers of the Articles in which reference is made in the Text.

CALCULATIONS RELATING TO THE FORMS AND DIMENSIONS OF SHIPS.

PLATE		ARTS.
I.	Trapezoidal Rule for Plane Areas—Simpson's First Rule,	8-10
II.	Simpson's First Rule—Fractional Intervals,	11, 12
III.	Simpson's Second Rule—Application of Simpson's and Trapezoidal Rules,	13-17
IV.	Centres of Gravity and Principle of Moments,	20-24
V.	Centre of Gravity of a Plane Figure bounded by a Curve—Displacement—Angular Measurement,	25-47
VI.	Curve of Areas of Midship Section—Curve of Sectional Areas,	37, 38
VII.	Curve of Tons per Inch of Immersion—Curve of Displacement,	39, 40
VIII.	Manner of arranging the Curves on the back of an ordinary Displacement Sheet,	40
IX.	Geometrical Method of determining Displacement,	42
X.	Mode of constructing the Curves by Geometrical Method,	42
XI.	Specimen Curve Sheet,	42
XII.	Dr. Woolley's Rule for obtaining the Displacement,	43-46
XIII.	The Metacentre and Surface Stability,	60-66
XIV.	Intersections of Water Planes—Method of Measurement for calculating Surface Stability,	68, 69
XV.	Body Plan of a Ship for calculating Surface Stability at an angle of 16°,	70
XVI.	Dynamical Surface Stability—Surface of Flotation—Surface of Buoyancy—Metacentric,	72-79

CALCULATIONS RELATING TO WEIGHTS AND CENTRES OF GRAVITY OF SHIPS.

XVII.	Diagrams representing a Ship inclined Transversely and Longitudinally,	85
XVIII.	Diagrams representing Stable and Unstable Equilibrium,	85, 86
XIX.	Experimental Method of finding the Centre of Gravity—Alteration of Trim due to Shifting and Adding Weights,	90-95
XX.	Effect on Trim and Stability by admitting Water into the Ship—Effect on the Stability by adding, moving, or removing a Weight,	96-99
XXI.	Calculation for Structural Weights: Expansion of Bottom,	111
XXII.	Calculation for Area of Bottom Plating without an Expansion,	112
XXIII.	Calculation for Centre of Gravity of Bottom Plating—Curves of Weights and Moments,	113-124
XXIV.	Metacentric Curves,	128
XXV.	Typical Curves of Statical Stability,	129
XXVI.	Body Plan of the Vessel to which the Calculations of Statical and Dynamical Stability relate,	129-141
XXVII.	Typical Curves of Dynamical Stability,	130
XXVIII.	Check Spot at 90°—Geometrical Mode of Calculating Dynamical Stability,	142-144
XXIX.	Curve of Statical Stability at Light Draught,	145
XXX.	Waves and Rolling: The Revolving Pendulum—Axis of Rotation,	147, 152
XXXI.	Form and Motion of Wave Surface and Sub-surface,	164-167
XXXII.	Internal Structure of a Wave—Passive Rolling,	170, 175
XXXIII.	Rolling in a Sea-way,	176

CALCULATIONS RELATING TO THE STRENGTH OF SHIPS.

PLATE		
XXXIV.	Specimens of different kinds of Riveting employed in Butt Straps,	188
XXXV.	Specimens of Edge Connections—Lap and Jump Joints,	189
XXXVI.	Strength of Butt Straps,	189
XXXVII.	Modes of Fracture,	190
XXXVIII.	Specimens of different Shifts of Butts,	190
XXXIX.	Strength of a Shift of Plates,	192-196
XL.	Beams: Shearing Stresses and Bending Moments,	197, 198
XLI.	Distributed Load—Distributed Load and Support,	199, 203
XLII.	Calculations of Bending Moments and Shearing Stresses for various modes of Loading,	204
XLIII.	Resistance to Bending,	207-210
XLIV.	The Deflections of Beams—Strength of Bent Pillars—Twisting Moments,	213-216
XLV.	Curves of Weights and Buoyancy,	217-219
XLVI.	Curves of Loads, Shearing Stresses, and Bending Moments in still Water,	220, 221
XLVII.	Stresses when among Waves—Curves of Weight and Buoyancy when among Waves,	222
XLVIII.	Curves of Loads, Bending Moments, and Shearing Stresses among Waves,	225
XLIX.	Section of an Iron Ship with the Neutral Axis drawn,	226
L.	Equivalent Girder for an Unarmoured Ship of War,	

CALCULATIONS RELATING TO THE PROPULSION OF SHIPS BY SAILS.

LI.	Various forms of Sails,	233
LII.-LIV.	Principal kinds of Rigs—Centre of Effort,	234-241
LV.	Sailing—Real and Apparent Motion—Effective Impulse of the Wind,	235-243
LVI.	Curves representing the Effective Pressures of Wind at every Angle of Incidence,	244
LVII.	Stability under Sail, Effect of a Gust of Wind,	245

CALCULATIONS RELATING TO PROPULSION OF SHIPS BY STEAM ENGINES.

LVIII.	Steam Trials at Varied Speeds—Mr. Froude's Curves,	251

CALCULATIONS RELATING TO THE STEERING OF SHIPS.

LIX.	Principle of the Rudder,	255-258
LX.	The Balanced Rudder,	262

TABLES.

TABLE		ARTS.
I.	Specimen of a "Displacement Sheet,"	41
II.	Specimen Calculation for Surface Statical and Dynamical Stability,	70-73
III.	Specimen Page of Results of Calculation for Weight of Hull, and Position of its Centre of Gravity,	107
IV.	Percentages to be added to the calculated Weights of Plating on account of Laps, Butt Straps and Liners, in Lap-jointed and Flush-jointed Work,	112
V.	Weights per Lineal Foot of the Butterly Co.'s Tee Bulb and Angle Beams, also of Bar Iron,	116
VI.	Weights of Angle and T-iron in lbs. per Lineal Foot,	116
VII.	Calculation for Curve of Stability,	129
VIII.	Table of Periods and Lengths of Waves in Deep Water, arranged according to their Velocities in Knots,	172
IX.	Tables of Resistances of Materials to Stretching and Tearing by a Direct Pull,	181
X.	List of the Position of the Centres of Effort of Sails and other particulars of Typical Vessels,	239
XI.	Results of Trials of Eleven Typical Steamships of the Royal Navy,	249

TABLE II.—*Continued.*

SPECIMEN CALCULATION FOR SURFACE STATICAL STABILITY.

COMBINATION TABLE.

For Area of Inclined Water Plane.

Immersed Wedge =	776·8
Emerged Wedge =	707·2
	1484·0
⅓ Longitudinal Interval,	29·5 / 3
Area, =	14592·9

For Centre of Gravity of Inclined Water Plane.

Functions of Ordinates,	Immersed,	776·8
	Emerged,	707·2
		1484·0
⅓ Longitudinal Interval,		29·5 / 3
		14592·7
Functions of Squares of Ordinates,	Immersed,	18234·5
	Emerged,	15602·2
		2)2632·3
		1316·2
⅓ Longitudinal Interval,		29·5 / 3
		14592·7)12944·6
C.G. of Area towards Immersed side,		·887

Correction for Statical Stability,
$= 1736{\cdot}1 \times {\cdot}887 = 1540$

For Difference in Volumes of the Wedges.

IMMERSED WEDGE.

Inclinations of Radial Planes.	Functions of Squares of Ordinates.	Simpson's Multipliers.	Functions of Squares for Volumes of Wedges.
0°	15949·8	1	15949·8
8°	16851·5	4	67406·0
16°	18234·5	1	18234·5
			101590·3

EMERGED WEDGE.

0°	15949·8	1	15949·8
8°	15610·9	4	62443·6
16°	15602·2	1	15602·2

For Emerged Wedge -	93995·6
For Immersed Wedge	101590·3
	2)7594·7
	3797·3
⅓ × Angular Interval =	·0465
	176·57
⅓ Longitudinal Interval,	29·5 / 3
Excess in Vol. of Emerged Wedge,	1736·1

For Statical Surface Stability.

BOTH WEDGES.

Sums of Functions of Cubes of Ordinates.	Simpson's Multipliers.	Products of Functions of Cubes.	Cosines of Inclinations	Functions of Cubes for Moments of Wedges.
729170·2	1	729170·2	·96126	700922·1
749099·6	4	2996398·4	·99027	2967243·9
798703·4	1	798703·4	1·00000	798703·4
				3)4466869·4
				1488956·4
⅓ × Angular Interval,				·0465
				69236·4
⅓ Longitudinal Interval,				29·5 / 3
				680824·6
Correction for Layer,				1540·0
Displacement in cubic feet,				209156)679284·6
				3·247 =

BN. (Fig. 1, Plate XVI.).

BM. Sin 16° = 3·247

$$\text{BM.} = \frac{3{\cdot}247}{{\cdot}2756} = 11{\cdot}78$$

Hence Moment of Surface Stability at 16 degrees is $3{\cdot}247 \times 5976 = 19404$ foot-tons.

FOR LONGITUDINAL POSITIONS OF CENTRES OF GRAVITY OF WEDGES.

IMMERSED WEDGE.

Inclinations of Radial Planes.	Functions of Squares of Ordinates.	Simpson's Multipliers.	Products of Functions of Squares.	Longitudinal Moments.	Simpson's Multipliers.	Products of Longitudinal Moments.
0°	15949·8	1	15949·8	105958·2	1	105958·2
8°	16851·5	4	67406·0	113284·3	4	453137·2
16°	18234·5	1	18234·5	123522·0	1	123522 0
			101590·3			)682617·4
						6·72

For Volume of Emerged Wedge -	93995·6
Do. Immersed,	101590·3
	4)195585·9
	48896·4
⅓ Angular Interval, -	·0465
	2273·7
⅓ Longitudinal Interval, -	29·5 / 3
Volume of a Wedge, -	22358 cubic feet = 639 tons.

Longl. Interval, 29·5

198·2 ft. abaft No. 1 Ordinate.
193·5

4·7 ft. = distance of C.G. of Wedge of Immersion abaft that of the Wedge of Emersion.

EMERGED WEDGE.

Inclinations of Radial Planes.	Functions of Squares of Ordinates.	Simpson's Multipliers.	Products of Functions of Squares.	Longitudinal Moments.	Simpson's Multipliers.	Products of Longitudinal Moments.
0°	15949·8	1	15949·8	105958·2	1	105958·2
8°	15610·9	4	62443·6	102518·2	4	410072·8
16°	15602·2	1	15602·2	101201·5	1	101201·5
			93995·6			)617232·5
						6·56

Longitudinal Interval, 29·5

193·5

or 193·5 ft. abaft No 1 Ordinate.

Hence $639 \times 4{\cdot}7 = 3003$ foot-tons, the pitching moment when inclined 16 degrees, due to form of the vessel.

TABLE II.—*Continued.*

SPECIMEN CALCULATION FOR SURFACE DYNAMICAL STABILITY.

COMBINATION TABLE.

FOR DYNAMICAL SURFACE STABILITY. BOTH WEDGES.					
Inclinations of Radial Planes.	Sums of Functions of Cubes of Ordinates.	Simpson's Multipliers.	Products of Functions of Cubes.	Sines of Inclinations.	Functions of Cubes for Moments of Wedges.
0°	729170·2	1	729170·2	·27564	200988·6
8°	749099·6	4	2996398·4	·13917	417008·7
16°	798703·4	1	798703·4	·00000	0·0

CORRECTION FOR DYNAMICAL SURFACE STABILITY.

Excess in Volume of Immersed Wedge = 1827·8.
Thickness of Layer, - - - = 1827·8 ÷ 14590·7.
= ·12 foot = A_1A_2 (Fig. 1, Plate XVI.).
Correction, - - - - - = $1827{\cdot}8 \times \frac{\cdot 12}{2}$.
= 109·7.

3)617997·3
205999·1
$\frac{1}{3}$ × Angular Interval, - = ·0465
9579·0
$\frac{1}{3}$ × Longitudinal Interval, - 29·5
3
94193·5
Correction for Layer, - - 109·7
Displacement in cubic feet = 209156)94083·8
NB_1 = ·45

$NB_1 - A_1A_2 = ·45 - ·12 = ·33$.
AB versin 16° = 8·2 × ·0387 = ·317.
D (·33 − ·317) = 5976 × ·02 = 119·5 foot-tons of mechanical work, which is the Dynamical Surface Stability.

GB versin 16° = 8·529 × ·0387 = ·33.
D (NB_1 − GB versin 16°) = 5976 (·45 − ·33) = 5976 × ·12 = 717·1 foot-tons of mechanical work, which is the Dynamical Stability.

* In using the above table, first calculate the weight of the Plating by measuring the exact area of the surface, then add the per centage for Laps, after which apply the per centage for Butt Straps and Liners, and add the whole together.

FLUSH-JOINTED WORK.

PER CENTAGES TO BE ADDED TO THE CALCULATED WEIGHTS OF PLATING ON ACCOUNT OF EDGE STRIPS AND BUTT STRAPS.

Thicknesses of Plates.	Diameters of Rivets.	Plates 16 feet long. Butt Straps full breadth of Plate. — Per centages applicable to Vertical Keel, Longitudinals, Stringers, &c. — Treble Riveted Double Straps, each 1·16 in. more than half the thickness of the Plates. $16\frac{1}{2}$ diameters width of Straps.	Treble Riveted Double Straps, each half the thickness of the Plate. $16\frac{1}{2}$ diameters width of Straps.	Double Riveted Double Straps, each half the thickness of the Plate. $11\frac{1}{2}$ diameters width of Straps.	Single Riveted Double or Single Straps. If Double, each Strap half the thickness of the Plate. $6\frac{1}{2}$ diameters width of Straps.	Plates 16 ft. long and 3 ft. 3 ins. wide, per centage applicable to Deck Plating, Inner Bottom Plating, Flush-Jointed Bulkheads, &c. — Double Riveting for both Edges and Butts. — Double Riveted Edge Strips. $11\frac{1}{2}$ diameters wide.	Double Riveted Butt Straps, when on opposite side to Edge Strips. $11\frac{1}{2}$ diameters wide.	Double Riveted Butt Straps, when on same side as Edge Strips. $11\frac{1}{2}$ diameters wide.	Single Riveted Edges and Double Riveted Butts. — Single Riveted Edge Strips. $6\frac{1}{2}$ diameters wide.	Double Riveted Butt Straps, when on opposite side to Edge Strips. $11\frac{1}{2}$ diameters wide.	Double Riveted Butt Straps, when on same side as Edge Strips. $11\frac{1}{2}$ diameters wide.	Single Riveting for both Edges and Butts. — Edge Strips. $6\frac{1}{2}$ diameters wide.	Butt Straps on opposite side to Edge Strips. $6\frac{1}{2}$ diameters wide.	Butt Straps on same side as Edge Strips. $6\frac{1}{2}$ diameters wide.

PLATE BULB IRON.

This form of section is rolled by many makers, and of many widths of web; the thickness of the latter for each width is also varied within the limits of about $\frac{1}{4}$ to $\frac{5}{16}$ of an inch. It is consequently impossible to compile a useful table of the weights per lineal foot of these beams; but the weight in any specific case may be easily obtained by first calculating the weight per lineal foot due to the width and thickness of the web, and adding thereto the weight of a lineal foot of round iron whose diameter is twice the thickness of the web when the latter is $\frac{3}{4}$ inch, and $2\frac{3}{4}$ times when it is $\frac{3}{8}$ inch; the diameters of the intermediate sizes varying in the inverse proportion of the thicknesses.

WEIGHTS PER LINEAL FOOT OF WROUGHT IRON BARS HAVING ROUND AND SQUARE SECTIONS.

CALCULATION FOR CURVE OF STABILITY.

No. 3.—COMBINATION TABLE.

CALCULATION OF STABILITY AT AN INCLINATION OF 24 DEGREES.

IMMERSED WEDGE.

Inclinations of Radial Planes.	Functions of Ordinates for Area of Inclined Water Section.	Functions of Squares of Ordinates.	Multipliers.	Functions of Squares of Ordinates for Volumes of Wedges.
Degrees.				
0	..	5316·6	1	5316·6
8	..	5650·5	3	16951·5
16	..	6078·2	3	18234·6
24	276·9	6879·2	1	6879·2

For Immersed Wedge	47381·9
For Emerged Wedge	41727·5
	5654·4
$\frac{1}{16}$ × Angular Interval	·0262
	148·1
Longitudinal Interval	29·5
Excess in Volume of the Immersed Wedge without the Appendage ..	4369·0

EMERGED WEDGE.

0	..	5316·6	1	5316·6
8	..	5203·6	3	15610·8
16	..	5200·7	3	15602·1
24	234·8	5198·0	1	5198·0
				41727·5

OUTLYING APPENDAGE.

In this case the Appendage is so very small that it can be safely neglected.

BOTH WEDGES.

Sums of Functions of Cubes of Ordinates.	Multipliers.	Products of Functions of Cubes.	Statical Stability. Cosines of Inclinations.	Statical Stability. Functions of Cubes for Moments of Wedges.	Dynamical Stability. Sines of Inclinations.	Dynamical Stability. Functions of Cubes for Moments of Wedges.

	2)1681·2
	840·6
	29·5
	15095·2)21797·7
C. G. of Area towards the Immersed side ..	1·64

CORRECTING LAYER.

Excess in Volume of the Immersed Wedge (found above)	4369·0

Thickness of Layer = 4369 ÷ 15095·2 = ·28 foot.

Correction for Statical Stability = 4369 × 1·7 = 7427·3.

Correction for Dynamical Stability = 4369 × ·14 = 611·7.

TABLE VII.—*Continued.*

CALCULATION FOR CURVE OF STABILITY.

No. 4.—COMBINATION TABLE.

CALCULATION OF STABILITY AT AN INCLINATION OF 32 DEGREES.

IMMERSED WEDGE.

Inclinations of Radial Planes.	Functions of Ordinates for Area of Inclined Water Section.	Functions of Squares of Ordinates.	Multipliers.	Functions of Squares of Ordinates for Volumes of Wedges.
Degrees.
